The Venn basin, by Arcisan, is the latest on-trend item in coloured bathroom products! Our basins have been crafted from 304 stainless steel, allowing the walls of the Venn basin to be only 4mm thick, which gives them a sleek modern look.

Available in 5 hard wearing PVD finishes; stainless steel, brushed brass, brushed copper, brushed carbon and brushed iron. Each basin has a special 'CrystalTect' coating applied that gives them a lustrous, non-stick finish as well as keeping them fingerprint free, so they continue to look their best. We have also added sound absorbing pads on the underside of the basin to help dissipate the sound of water hitting the stainless steel. Plus each basin comes with a colour matching high gloss plug and waste that conveys an extra level of luxury.
